

# Sprinkles on top

- The utility library contains other features that are nice in combination with logging. For instance `util_timestamp.h` contains a convenience tool to mark ones log with the time of the day
  - `logging << util::timestamp() << newline;`
- The `util_string_helpers.h` is quite useful too. For instance the `util::to_value` and `util::to_string` functions are convenient.

# How to use util::Profiling

See for instance elasticity or liquid demos for example  
code
